

## In the Name of God

On the 11, January , 2012, once again one of the public servants within the Iranian peaceful nuclear energy technology sector was martyred in a terror attack.

Late *Mostafa Ahmadi Roshan* was a scientist graduated in polymer technology from the Sharif University of Technology in Tehran. He had published several scientific articles in Persian and English in different technological scientific magazines.

Late *Mostafa Ahmadi Roshan* was killed when two terrorists on a motorbike attached a magnetic bomb to the car which he was sitting in.

As it has been witnessed by the international community, the Islamic Republic of Iran has at several occasions stated that Iran is a victim of terrorism and for many years hundreds of Iranian Citizens have been killed in terrorist actions.

The recent terrorist attack against Iranian scientists is not the first one because in last two years some other Iranian scientists and university teachers within the sector of nuclear technology have been victimised in terror attacks.

The terror attack on the 11, January , 2012, against martyr *Mostafa Ahmadi Roshan* took place on the anniversary of a similar assassination of the physicists, Dr. *Massoud Ali Mohammadi* and Dr. *Majid Shahriari*.

Trying to prevent the Iranian scientific development by means of terror is an utmost inhuman deed.

The Embassy of the Islamic Republic of Iran in Stockholm condemns terror actions and regards these incidents as being in line with some countries' actions and positions taken with the aim of trying to prevent and stop the Iranian development within the technological and scientific areas such as the peaceful nuclear technology.
